

Christina Ma recommending SILS

Behaviours Supprt specialist

It seems you've shared a detailed document about Richard McLean, including his background, medical and mental health history, and a proposed Interim Behaviour Support Plan (IBSP). This plan outlines preventive and response strategies for managing his behaviors, risks, and overall care. The document also covers the responsibilities of various stakeholders involved in Richard's support, such as behavior support practitioners, support workers, and healthcare providers.

If you need specific parts of this document summarized, rephrased, or need help with something specific, please let me know!

Yes, the Interim Behaviour Support Plan recommends that Richard McLean be placed in Supported Independent Living (SIL) or Specialist Disability Accommodation (SDA). This recommendation is made to provide him with a stable and supportive environment, which is deemed essential given his complex psychiatric and medical history. The plan emphasizes that SIL or SDA would offer a structured and safe living space with trained professionals who can provide 24-hour supervision, assistance for daily living, and medication administration. This setup aims to address Richard's mental health needs and reduce the likelihood of homelessness or exposure to environments that could exacerbate his vulnerabilities.

****Summary of the Report for Richard McLean****

Richard McLean, a 49-year-old male, has been diagnosed with multiple mental health conditions, including Schizophrenia and ADHD, alongside Adjustment Disorder, Borderline Personality Disorder, Schizoaffective Disorder, PTSD, Anxiety, Panic Disorder, Short-term Memory Loss, and Arthritis. He currently resides in temporary housing due to a history of homelessness.

The Occupational Therapy (OT) assessment and Supported Independent Living (SIL) report were conducted to evaluate Mr. McLean's needs and provide recommendations. The assessment identified significant challenges in his daily functioning, particularly due to his paranoid delusions, which lead to social withdrawal, difficulty in trusting others, and avoiding activities perceived as threatening. Mr. McLean also struggles with self-care, financial stability, and treatment compliance.

Recommendations:

1. ****Occupational Therapy****: 10 hours annually for functional capacity assessment and 30 hours annually for ongoing support to enhance daily living skills, executive functioning, and emotional regulation.

2. ****Specialist Support Coordination****: 150 hours per year to assist in organizing support and ensuring his needs are met.
3. ****Specialist Disability Accommodation (SDA)****: Full-time (24/7) support in a private setting with no other participants, due to high-risk behaviors. The accommodation should include an extra bedroom for support staff.

Overall, Mr. McLean requires comprehensive and continuous support to manage his conditions and improve his quality of life [oai_citation:1,R MCLEAN OT SIL REPORT AH2U .pdf](file-service://file-rTNiDUAhne79CC0EtinoeR7j).
